

### Listing of Claims

1. (Currently amended) A parallel processor comprising:  
a plurality of shared memory cells, each shared memory cell comprising a [single non-volatile] magnetic memory cell integrated with a [single] DRAM cell, wherein a word line (WL) is connected to the magnetic memory cell and the DRAM cell;  
a plurality of processor elements, each processor element being integrated with a shared memory cell, each processor elements accessing data from a corresponding shared memory cell that is integrated with the processor element, and performing processing on the data.
2. (Canceled) The parallel processor of claim 1, wherein the non-volatile memory cells comprise magnetic memory cells.
3. (Currently amended) The parallel processor of claim 1, wherein each processor element can access a plurality of [non-volatile] magnetic memory cells.
4. (Currently Amended) The parallel processor of claim [2] 1, wherein each magnetic memory cell is interfaced with a corresponding one dynamic random access memory (DRAM) cell.
5. (Canceled) The parallel processor of claim 2, wherein each magnetic memory cell is formed adjacent to a substrate, and the corresponding processor element is formed in the substrate proximate and adjacent to the magnetic memory cell.
6. (Canceled) The parallel processor of claim 1, wherein each magnetic memory cell is formed adjacent to a substrate, and the corresponding processor element and DRAM cell are formed in the substrate proximate and adjacent to the magnetic memory cell.
7. (Original) The parallel processor of claim 1, further comprising:

a master processor for receiving processed data from the plurality of processor elements.

8. (Original) The parallel processor of claim 7, wherein the master processor performs additional processing of the data.
9. (Original) The parallel processor of claim 1, further comprising:  
an array of image sensors, an image sensor corresponding with each of the magnetic memory cells.
10. (Currently Amended) The parallel processor of claim 9, wherein each image sensor receives image data that can be stored in the corresponding [non-volatile] magnetic memory cell [element].
11. (Currently amended) The parallel processor of claim 10, wherein each processing element performs processing on the image data stored in a corresponding [non-volatile] magnetic memory cell [element].
12. (Currently amended) The parallel processor of claim 10, wherein the received image data is additionally stored in at least one DRAM cell [corresponding] integrated with the [non-volatile] magnetic memory cell [element].
13. (Currently amended) The parallel processor of claim 9, wherein each image sensor is formed adjacent to a corresponding [non-volatile] magnetic memory cell [element], and each non-volatile memory element is formed adjacent to a substrate, the substrate comprising a corresponding processor element formed adjacent to the [non-volatile] magnetic memory cell [element].
14. (Currently Amended) The parallel processor of claim 12, wherein each image sensor is formed adjacent to a corresponding [non-volatile] magnetic memory cell [element], and each [non-volatile] magnetic memory cell [element] is formed

adjacent to a substrate, the substrate comprising a corresponding processor element and DRAM cell formed adjacent to the [non-volatile] magnetic memory cell [element].

15. (Currently amended) The parallel processor of claim 1, further comprising:  
an array of display pixels, each display pixel integrated with a [non-volatile] magnetic memory cell.
16. (Currently amended) The parallel processor of claim 15, wherein each display pixel displays image data that is stored in the integrated [non-volatile] magnetic memory cell [element].
17. (Currently amended) The parallel processor of claim 15, wherein each processing element performs processing on the image data stored in the [integrated non-volatile] magnetic memory cell [element].
18. (Currently amended) The parallel processor of claim 15, wherein the received image data is additionally stored in one DRAM cell integrated with the [non-volatile] magnetic memory cell [element].
19. (Currently amended) The parallel processor of claim 15, wherein a display pixel receives image data from a [non-volatile] magnetic memory cell [element], and wherein the display pixel is an LED and a bias current of the LED is dependent upon a resistance of the [non-volatile] magnetic memory cell [element].
20. (Cancel) The parallel processor of claim 15, wherein each display pixel is formed adjacent to a corresponding non-volatile memory element, and each non-volatile memory element is formed adjacent to a substrate, the substrate comprising a corresponding processor element formed adjacent to the non-volatile memory element.

21. (Currently Amended) The parallel processor of claim 18, wherein each display pixel is formed adjacent to a corresponding [non-volatile] magnetic memory element, and each [non-volatile] magnetic memory element is formed adjacent to a substrate, the substrate comprising a corresponding processor element and DRAM cell formed adjacent to the [non-volatile] magnetic memory element.
22. (Currently amended) A method of parallel processing, comprising:  
storing data in a plurality of [non-volatile] magnetic memory cells;  
processing the data with a plurality of processor elements which are integrated with the [non-volatile] magnetic memory cells and DRAM cells, each processor element accessing data from the integrated [non-volatile] magnetic memory cell and integrated DRAM cell by selecting a word line (WL) connected to the magnetic memory cell and the DRAM cell, and performing processing on the data.
23. (Currently amended) A computing system comprising:  
a central processing unit;  
a parallel processor connected to the central processing unit, the parallel processor comprising:  
a plurality of processor elements, each processor element being integrated with a [non-volatile] magnetic memory cell, each processor elements accessing data from the [non-volatile] magnetic memory cell and an integrated DRAM cell, wherein a word line (WL) is connected to the magnetic memory cell and the DRAM cell [and that are most proximate to the processor element, and performing processing on the data.]
24. (Cancelled) The parallel processor of claim 4, wherein a word line (WL) is connected to [each non-volatile] a magnetic memory cell and a corresponding dynamic random access memory (DRAM) cell.

25. (Currently amended) The parallel processor of claim 1 [24], wherein the word line (WL) is connected a MRAM controlling transistor of the non-volatile memory and to a DRAM controlling transistor of the dynamic random access memory (DRAM) cell, and wherein a first metallization layer forms conductive contacts to an MRAM gate of the MRAM controlling transistor, a DRAM gate of the DRAM controlling transistor and to a DRAM capacitor, a second metallization layer forms a conductive contact to the non-volatile memory, a third metallization layer forms another conductive contact to the non-volatile memory, and a fourth metallization layer forms a non-volatile memory write word line.
26. (Cancel) The parallel processor of claim 5, wherein the corresponding processor element is formed in the substrate most proximate to the magnetic memory cell.
27. (Cancel) The parallel processor of claim 6, wherein the corresponding processor element and DRAM cell are formed in the substrate most proximate to the magnetic memory cell.
28. (Previously presented) The parallel processor of claim 9, wherein the image sensor corresponding with a magnetic memory cell is the image sensor most proximate to the magnetic memory cell.
29. (Cancel) The parallel processor of claim 15, wherein the display pixel corresponding with a non-volatile memory cell is the display pixel most proximate to that is integrated with the non-volatile memory cell.
